

Commercial Name	INCI	Description
ISOCIDE® OC	o-cymen-5-ol	Highly versatile preservative, compatible with the majority of ingredients used in cosmetic formulations. Ideal for body care, toiletries, sun care, make-up, and skin care applications.
ISOCIDE® IMU	Imidazolidinyl Urea	Water-soluble preservative, also soluble in hydroalcoholic solutions. Broad-spectrum activity: effective against both Gram+ and Gram- bacteria. Commonly used to protect formulations from potential contamination by Pseudomonas species.
ISOCIDE® PH	Phenoxyethanol	Preservative primarily active against Gram- bacteria. Effective within a pH range of 3 to 8.5. Exhibits excellent solvent properties for a wide range of organic substances.
ISOCIDE® BAS	Benzyl Alcohol, Dehydroacetic Acid, Aqua	Globally approved preservative with a safe toxicological profile (supported by in vivo studies). Broad-spectrum antimicrobial activity. Highly effective even at low use concentrations in formulations with pH <5.
ISOCIDE® C	Methylchloroisothiazolinone, Methylisothiazolinone, Magnesium Nitrate, Magnesium Chloride	Broad-spectrum preservative characterized by low effective use levels, particularly recommended for rinse-off products. Its activity may be reduced in the presence of strong reducing agents, primary amines, and highly alkaline pH conditions.
ISOCIDE® CLG	Caprylyl Glycol	Humectant used as a non-listed preservative for its bacteriostatic activity.
ISOCIDE® HXD	1,2-Hexanediol	Humectant used as a non-listed preservative for its bacteriostatic activity.
ISOCIDE® EHG	Ethylhexylglycerine	Broad-spectrum preservative effective even at very low concentrations. Also provides emollient and moisturizing benefits.
ISOCIDE® 91	Phenoxyethanol, Ethylhexylglycerine	Broad-spectrum liquid preservative. The addition of ethylhexylglycerin reduces the interfacial tension at the microbial cell membrane, enhancing its antimicrobial activity.
DUB DIOL	Methylpropanediol	Multifunctional ingredient acting as a carrier and solubilizing agent for preservatives and fragrance compounds. Provides emollient and humectant benefits while delivering mild bacteriostatic activity, enhancing the microbiological stability of cosmetic formulations.

Commercial Name	INCI	Description
DUB MUG	Glyceryl Undecylenate	Fully plant-derived ingredient suitable for use in organic cosmetic formulations. In addition to its skin conditioning properties, it exhibits notable antimicrobial activity. At a usage level of 0.1%, it functions as a preservative effective against both Gram+ and Gram- bacteria. In anhydrous systems, it can be employed as a preservative for the oil phase.
SALIGUARD ULTIMA 2	Gluconolactone, Calcium Gluconate, Potassium Sorbate	SALIGUARD ULTIMA 2 is a preservative blend designed to offer broad-spectrum protection. It is used in shampoos, conditioners, rinses, skincare products like liquid soaps, shower gels, sensitive skin lotions, moisturizers and cold creams. It is also recommended for sunscreens lotions, creams, surfactants, shampoo blends and conditioner blends.
SALIPHENESIN	Chlorphenesin	Chlorphenesin is an antimicrobial agent that prevents bacteria from developing in cosmetics. It could cause irritations, but they seem rather rare and light in regulated concentrations of 0.3%.
SALICAP G	Caprylyl Glycol	Caprylyl glycol is a great ingredient used in thousands of products because of its hydrating and moisturizing properties. It attracts water to the topmost layer of the skin and locks it there. Caprylyl glycol is also a preservative that increases the shelf life of the products that it is used in. It is used in a variety of products such as moisturizers, cleaners, and foundations.
SALIPHARM SA	Salicylic acid	Salicylic Acid is an exfoliant and anti-acne agent. It can be used for skin peels, anti-dandruff products and in products for oily, acneic and/or blemished skin. It is ideal for making products that need higher concentrations of salicylic acid. Salicylic Acid is also used in wart-removing products.
SALLITOIN	Allantoin	Allantoin is a moisturizing and healing agent that has the ability to shed dead skin cells and leave the skin fresh and glowy. It is used in a variety of cosmetic and personal care products because of its many benefits. Allantoin is one of the latest trending ingredients that can be found in shampoos, scar creams, acne products and lotions. It improves skin irritation and hydration levels while also reducing the impacts of aging on the skin.
SALIMINE	Piroctone Olamine	Piroctone Olamine is a synthetic ingredient that is used mainly as a preservative in personal care and cosmetic products. Shampoos with Piroctone Olamine are very effective in curing dandruff and preventing hair loss. This ingredient has anti-fungal properties and appears as a crystalline powder in its raw form that is white or slightly yellow in color. Further, Piroctone Olamine is slightly soluble in oil and water.

Commercial Name	INCI	Description
SALIBIDE DMI	Dimethyl Isosorbide	Dimethyl Isosorbide is quite an effective ingredient that is used primarily in water-based ingredients to improve their consistency and texture. It is also an amazing emollient that locks moisture on the topmost layers of the surface, preventing dryness and flaking. It appears as a clear transparent liquid that is colorless to slightly yellow in color. Further, Dimethyl Isosorbide improves the penetration of a product and thus its performance. Contrary to common perception, it is not silicone.
