

Commercial Name	INCI	Description
ImerCare® 90P, 120P, 190P, 270P, 400P, 700P, 800 P scrub, Sandyscrub	Perlite	Perlite products are made from a volcanic glass which contains water in its inner structure. When heated rapidly, the steam produced expands the glass to form a foamed structure which can be used, when processed in fine controlled particles, in many different personal care products. This product shows high purity and abrasivity that enable it as the perfect alternative to the synthetic polyethylene microspheres for a natural and mild scrub.
ImerCare® PerlWhite	Perlite	ImerCare® PerlWhite 19 is morphologically modified perlite. Its mild abrasive action makes it ideal for use in tooth pastes.
ImerCare® KaoBright	Kaolin	ImerCare® KaoBright is a tailor-made kaolin for use in toothpastes as a natural alternative to abrasive silicas
TIXOSIL 68	Hydrated silica	Cleaning silica with good abrasiveness. Ideal for toothpastes with a “micro-granule” effect
TIXOSIL 73	Hydrated Silica	Polishing silicone with high dentin abrasivity.
TIXOSIL SOFTCLEAN	Hydrated silica	New silica that allows mild dentine abrasion while maintaining efficient cleaning power. This product is particularly suitable for the formulation of toothpastes for children and sensitive gums.
