

Commercial Name	INCI	Description
ImerCare® 02K-S, 04K, 07K, 2K	Kaolin	Kaolin is a natural hydrated aluminium silicate. Careful processing produces soft, fine powders suitable for use in various personal care products. This product range is specifically designed for formulations where purity, rheology and high whiteness are desired. Used in skin care and make-up products for high oil absorption.
ImerCare® 06D, 18D, 400D	Diatomaceous Earth	Diatomite is a mineral material consisting mainly of fragments of various species of fossilised algae remains. It possesses a high degree of absorption, excellent mattifying effect and gentle abrasiveness. Used in personal care and body wash formulations.
ImerCare® 20P, 25P, 30P	Perlite	Perlite products are made from a volcanic glass which contains water in its inner structure. When heated rapidly, the steam produced expands the glass to form a foamed structure which can be used in many different personal care products. This range of products perfectly meets high purity, high absorption, excellent matting effect and gentle abrasiveness requirements. Used in make-up, hair care and body & face scrub products.
ImerCare® Matte	Kaolin	Morphologically modified kaolin that increases the absorption of sebum and gives a natural matt effect to the complexion.
ImerCare® 6M	Mica	ImerCare® 6M is a mica-based product that has been specifically engineered to optimize particle size and lamellarity, making it an ideal mineral base for pressed powders.
ImerCare® Blur	Calcium Carbonate	ImerCare® Blur is a morphologically modified calcium carbonate capable of imparting a soft focus and texturising effect to the finished product.
ImerCare® VitalSkin	Diatomaceous Earth	Diatomite with tested anti-pollution effect. Ideal for the creation of powder make-up products.
ImerCare® Suntouch	Perlite	Expanded milled Perlite. Thanks to the fine particle size, brings dry and mattifying effect and improve the absorption. Compatible with the most used sun care formulas
ORGASOL 2002 D NAT COS	Nylon-12	Better texturising effect and better capacity of absorption of oil than of the nylon 6. It can be used as a carrier of actives with controlled release properties. Helps the compaction of powders. The oil in water ripartition coefficient makes it more suitable for use in non-water based formulations, make-up. Particles size diameter: 20 microns.
ORGASOL 2002 EXD NAT COS	nylon-12	Better texturising effect and better capacity of absorption of oil than the nylon 6. It can be used as a carrier of actives with controlled release properties. Helps the compaction of powders. The oil in water ripartition coefficient makes it more suitable for in non-water based formulations, make-up. Particles size diameter: 10 microns.

Commercial Name	INCI	Description
ORGASOL 2002 EXD NAT COS TYPE S	Nylon-12	Better texturising effect and better capacity of absorption of oil than the nylon 6. It can be used as a carrier of actives with controlled release properties. Helps the compaction of powders. The coefficient of oil distribution in water makes it more suitable for formulations used in non-water based formulations, make-up. Particles size diameter: 10 microns, spherical.
ORGASOL 2002 UD NAT COS	Nylon-12	Better texturising effect and better capacity of absorption of oil than the nylon 6. It can be used as a carrier of actives with controlled release properties. Helps the compaction of powders. The oil in water ripartition coefficient makes it more suitable for anhydrous formulations, make-up. Particles size diameter: 5 microns.
ORGASOL 4000 EXD NAT COS CARESSE	Nylon 6/12	It is a spherical microporous powder specifically designed to disperse easily in watercontinuous formulations maintaining a velvety touch and a high persistence. In light formulations, it conveys a soft and rich texture without adding oily compounds. In rich formulations, it increases the absorption feeling and reduces the greasiness and stickiness due to oily ingredients or sunscreens. Provides a powdery finish and a smooth feeling combined with a soft focus effect.
ORGASOL CARESSE	Polyamide-5	It is a spherical microporous powder specifically designed to disperse easily in watercontinuous formulations maintaining a velvety touch and a high persistence. In light formulations, it conveys a soft and rich texture without adding oily compounds. In rich formulations, it increases the absorption feeling and reduces the greasiness and stickiness due to oily ingredients or sunscreens. Provides a powdery finish and a smooth feeling combined with a soft focus effect.
ORGASOL HYDRA+	Nylon-12, Sodium Hyaluronate	The synergy between Orgasol and Hyaluronic acid gives to this product very high moisturizing and volume restoring properties on the skin reducing the appearance of fine lines and wrinkles.
ORGASOL RESTORE	Polyamide-5, Olive glycerides, Ceramide-3	A new active ingredient into beauty treatment. It helps mature skin fight dryness and discomfort from skin roughness; it reduces the fine lines and wrinkles while restoring the tonicity and suppleness of the Skin.
PURE-DENT B836	Zea Mays (Com) Starch	The PURE-DENT line of starch powders has many applications in the personal care sector. PURE-DENT corn starches are used in powders, lotions, creams, sun care products, deodorant sticks, bath tablets and granulations.
